This product supports the following areas of child development.

Fine Motor Skills

Competitive Play

Tactile Stimulation

Inclusive Play

Auditory Stimulation

Games & Puzzles

Description

The Memory and Reactions Game Panel has two superb electronic games in one panel. The games are selectable during the game start up, with the option of playing a fast paced reactions game which requires the player to react to the flashing LED light by touching the sensor to turn it off, or a memory game version where you have to remember the sequence that is played and then touch the corresponding sensor pads to replay that sequence, while each time the sequence gets longer. Both games are easy to play and can be addictive by generating a lot of competition trying to beat each other's best scores. The games feature a narrated introductions, final score announcement and musical notes for user feedback during play. Each game lasts approx 30 seconds. This game is supplied to run off battery power as standard, however you can specify this unit with a mains power adaptor for hard wiring and also solar power is available. All AMV Play Panels can be wall mounted or mounted onto posts fixed into the ground. Multiple panels can installed side by side or back to back. Please ask for further details of the options available.
